Managing Allergies

Seasonal allergies occur when outdoor molds and plant pollens from weeds, grasses, and trees become active. This is known as “hay fever,” and typically occurs in the spring. Common symptoms include sneezing, a stuffy nose, and watery, itchy eyes.

While seasonal allergies are common, some people have symptoms that occur throughout the year thanks to perennial indoor allergens such as dust mites or pet dander. An allergy may develop later in life, or a person may discover it when they are exposed to a new allergen due to travel, a move, or a change in life circumstances. Many people are allergic to multiple things or may have allergy-triggered asthma.

If you have allergies, consider these steps for minimizing discomfort:

- **Limit outdoor activities.** If flowers, trees, or grasses cause an allergic reaction, stay inside and keep windows closed when vegetation is in bloom. Shower and wash your hair after spending time outdoors. An air conditioner or air filter will decrease allergens in an indoor space.

- **Maintain your home heating and cooling system.** If you are sensitive to dust, change filters monthly (or whenever you notice any irritation). Annual HVAC maintenance and duct cleaning will also minimize irritants.

- **Clean your house.** Regular cleaning and vacuuming prevents allergens from building up inside your living space.

- **Avoid smoke and other irritating fumes.** If you are a smoker, consider quitting. Perfumes or colognes, hairspray, and other aerosol products may also cause an allergic reaction. If a particular product sets off your allergies, look for other options.

- **Manage pet allergies.** Pets and allergies are sometimes a bad combination. If you are sharing a house with a pet, brush and groom them regularly and use an anti-allergenic pet shampoo. Consider making your bedroom off limits.

If home and lifestyle adjustments do not improve your allergies, it may be time to talk to your doctor. In addition, LifeMatters can help you brainstorm workarounds for allergy-related challenges. Call today!
